PRODUCT SUITABILITY

The Fund is suitable for investors who:

- (i) wish to capitalise on the opportunities offered by the natural resources sectors;
- (ii) seek an investment well-diversified across the Asia Pacific markets;
- (iii) are willing to accept moderate to high risk in their investments; and
- (iv) prefer capital growth rather than income over a long term* period.

*Note: * "long term" in this context refers to a period between 5 – 7 years.*

KEY PRODUCT FEATURES

INVESTMENT OBJECTIVE

The Fund aims to achieve long term* capital appreciation through investments in securities of companies whose businesses are in or are substantially related to the natural resources sectors.

*Note: * "long term" in this context refers to a period between 5 – 7 years.*

INVESTMENT STRATEGY

The Fund will invest in securities of and securities relating to companies whose businesses are in or are substantially related to the natural resources sectors such as but not limited to plantations (e.g. palm oil, rubber, timber), oil and gas, energy and mining including without limitation, supply chain from upstream to downstream which may involve the development, production, distribution, sales or services of these sectors. These are companies that have attractive growth potential, sound fundamentals and good management, and whose securities are listed or traded in the Asia Pacific markets such as Malaysia, Australia, China, Hong Kong SAR, India, Indonesia, Japan, New Zealand, Philippines, Singapore, South Korea, Sri Lanka, Taiwan and Thailand.

The Fund's portfolio will be structured as follows:

Minimum 70% of the Fund's net asset value ("NAV") - Investments in securities of companies whose businesses are in or are substantially related to the natural resources sectors.

The balance of the Fund's NAV - Investments in liquid assets including bonds, money market instruments and deposits.

Subject to the range stipulated above, the above asset allocation will be reviewed from time to time depending on the judgement of the Manager as to the general market and economic conditions. Although the Fund is actively managed, how active or the frequency of its trading strategy will very much depend on market opportunities.

The risk management strategies and techniques employed by the Manager include diversification of the Fund's investments in terms of its exposure to various industries, sectors, countries and asset classes and/or type of investments (i.e. equity, fixed income securities, money market instruments). Financial derivatives may also be used for hedging purposes where appropriate. Generally, the assets of the Fund will be invested over a medium to long term period with disposal of the investments when necessary to control risk as well as to optimise capital gains. This is especially so when the full growth potential of the investment is deemed to have been reduced over a prolonged rise in equity values and the other available investments may present cheaper valuations and potential higher returns. The Fund also complies with the permitted investments and restrictions imposed by the Securities Commission Malaysia. Adherence to the permitted investment and restrictions also helps the Manager to risk-manage the Fund's portfolio in terms of diversification. Moreover, the Manager in making its investment decisions shall at all times comply with the investment restrictions of the Fund and requirements as set out in the deed of the Fund.

For investments in foreign markets, the Manager in managing the principal risks such as country risk and currency risk will always take into consideration the reference benchmark as well as its evaluation of the historical developments and its prior experience in such markets. Such practice will be managed through active management and constant review of the economic and political developments of the countries invested. Investments will ultimately be made based on risk-reward.

The Manager may take temporary defensive positions that may be inconsistent with the Fund's principal strategy in attempting to respond to adverse economic, political or any other market conditions. In such circumstances, the Manager may reallocate up to 100% of the Fund's investments into other asset classes such as fixed income securities, money market instruments and deposits, which are defensive in nature.

BENCHMARK

KEY PRODUCT FEATURES

DISTRIBUTION

DISTRIBUTION POLICY - Consistent with the Fund's objective to achieve long term* capital appreciation, distributions will therefore be of secondary importance. Distributions, if any, after deduction of taxation and expenses are generally declared annually and will be reinvested.

DISTRIBUTION MODE - Distribution, if any, after deduction of taxation and expenses (i.e. net distribution), will be reinvested to purchase additional units of the Fund based on the NAV per unit as at the first Business Day after units of the Fund are quoted ex-entitlement. Allotment of such units shall be within two (2) weeks thereafter. No sales charge will be imposed for any reinvestment of distribution into the Fund.

*Note: * "long term" in this context refers to a period between 5 – 7 years.*

KEY RISKS

As the Fund focuses on securities of companies whose businesses are in or are substantially related to the natural resources sectors, investors should note that the Fund carries greater risks of adverse developments than a fund that invests in a wider variety of industries. The securities of companies in the natural resources sector may experience more price volatility than securities of companies in other industries. Some of the commodities used as raw materials or produced by these companies are subject to broad price fluctuations as a result of industry wide supply and demand factors. As a result, companies in the natural resources sector often have limited pricing power over supplies or for the products they sell which can affect their profitability.

The Fund's concentration in the securities of companies with substantial natural resource assets will expose the Fund to the price movements of natural resources to a greater extent than a more broadly diversified unit trust fund. Because the Fund invests primarily in this economic sector, there is the risk that the Fund will perform poorly during an economic downturn or a slump in demand for natural resources.

The value of the Fund's units is also vulnerable to factors affecting the natural resources industry such as increasing regulation of the environment by governments. Increased environmental regulations may, among other things, increase compliance costs and affect business opportunities for the companies in which the Fund invests. Other factors affecting the natural resources industry include changes in laws relating to mining or production or sales as well as increased labour or other costs in mining.

In addition, as the Fund may invest in foreign markets, it may be subject to further risks, such as currency risk and country risk, when compared to a portfolio which concentrates its holdings in a single market or economy. Furthermore, share investments are susceptible to the movements of share prices which can rise or fall for a number of reasons such as industry trends, economic factors, changes in a company's operations, management and financial performance as well as market perception of that particular company. The country risk and currency risk are as elaborated below:

CURRENCY RISK - Where a percentage of the value of the Fund is invested in foreign currency or assets denominated in a foreign currency, the Fund may be exposed to currency risk. Fluctuation in foreign exchange rates will affect the value of the Fund's foreign investments when converted into local currency and subsequently the value of the investments of unit holders of the Fund ("Unit Holder(s)"). This risk can be mitigated by investing in a wide range of foreign currency denominated assets thus diversifying the risk of single currency exposure. Hedging may be applied to mitigate the currency risk, if necessary.

COUNTRY RISK - In addition to currency risk, the Fund is also subject to country risk. The value of the assets of the Fund may also be affected by the economic and political climate, restriction on currency repatriation or other developments in the law or regulations of the countries in which the Fund may invest. Further, when investing in foreign markets, there are countries which may require prior approvals before investments can take place. For example, if and when the Fund invests in countries such as China, Taiwan, South Korea and India, where such countries require the application of an investment licence or registration of an investor code before any investment can be made in these countries. As such, if investments in such countries are undertaken, there may be a risk that such registration or licence may be revoked or not renewed by the relevant authority and the Fund's investment in these countries may be affected. The effect on the Fund's investments will depend on the regulatory requirements of the respective countries. For example, if a foreign market requires the Fund to obtain an investment licence which is subject to renewal and if such investment licence is not renewed in a timely manner, this may result in the Fund's investment account in that country being frozen by the regulator resulting in investment activities for the Fund in that country being suspended. To mitigate this, the Manager will monitor closely the adherence of investment regulatory requirements in such countries.

Note: If your investments are made through an institutional unit trust scheme adviser ("IUTA") which adopts the nominee system of ownership, you would not be deemed to be a Unit Holder under the deed of the Fund and as a result, you may not exercise all the rights ordinarily conferred to a Unit Holder (e.g. the right to call for Unit Holders' meetings and the right to vote at a Unit Holders' meeting). Accordingly, the Manager will only recognise the IUTA as a Unit Holder and the IUTA shall be entitled to all the rights conferred to it under the deed of the Fund.

Accordingly, the price of the Fund for a particular Business Day will not be published online on the Manager's website on the next day but will instead be published the next following day (i.e. the price will be two (2) days old).
