- Commentary: Global equities higher for the month after concerns about emerging markets subsided. Developed Market equities represented by the MSCI AC World Index gained 2.5%. Asian equities represented by the MSCI AC Asia ex Japan Index gained 1.1%. Emerging Market equities represented by the MSCI Emerging Markets Index gained 0.9%. Malaysia's benchmark FBM KLCI Index gained 2.1%.
 - Equity Market Strategy: Equities remain an attractive investment proposition on the back of rising
 yields environment and improving global economic outlook. We continue to favour Asia ex-Japan and
 Emerging Markets region although we recognise selected EM markets are facing some domestic
 economic issues. These two regions continuing to offer some of the most attractive upside potential as
 their valuation still sport a substantial discount to its estimated fair value.
- Bond Market Strategy: We continue to underweight fixed income asset class to guard against the
 potential rise of interest rate. Within the fixed income portion, we prefer EM debts and Asian bonds
 which are expected to fare better in a growth-centric environment given their lower sensitivity on interest
 rate risk and positive correlation on economic activity. Locally, we believe the negative impact of the
 rising yields might be milder on local bonds especially corporate debts, because of the higher credit
 spread over Malaysia government bonds, stable interest rate environment and no signs of rising credit
 risk observed so far
