Fund details

Characteristic	Fairly aggressive
Fund category/type	Balanced / Growth and income
Launch date	11 August 2003
Financial year end	30 June
Fund size	RM3.4 million (as at 28 August 2020)
NAV per unit	RM0.4670 (as at 28 August 2020)
Highest/Lowest NAV per unit (for current financial year)	Highest 7 Nov 2019 RM0.4697 Lowest 19 Mar 2020 RM0.3635
Income distribution	Once a year, if any.
Sales charge	Up to 5.00% of the Fund's NAV per unit
Annual management fee	Up to 1.50% p.a. of the NAV of the Fund
Fund managers	Jolynn Kek / Oh Jo Ann
Sales office	BOS Wealth Management Malaysia Berhad (formerly known as Pacific Mutual Fund Bhd) 199501006861 (336059-U) customercare@boswm.com

* Negative allocation was due to higher payables compared to receivables as at 31 August 2020.

□ Income is in reference to the Fund's distribution, which could be in the form of cash or units.

+ Volatility Factor (VF) as at 31 July 2020: 10.7. Volatility Class (VC) as at 30 June 2020: Moderate (above 9.6 and below/same as 12.8). VF means there is a possibility for the Fund in generating an upside return or downside return around this VF. VC is assigned by Lipper based on quintile ranks of VF for qualified funds. VF is subject to monthly revision and VC is revised every six months. The Fund's portfolio may have changed since this date and there is no guarantee that the Fund will continue to have the same VF or VC in the future. Presently, only funds launched in the market for at least 36 months will display the VF and its VC. Source: Lipper.

Fund Commentary

- Equity exposure was maintained around 57-58%.
- The Fund tactically traded Healthcare names while adding Consumer Staples exposures.
- The Fund is expected to employ a trading strategy amid high volatility, with equity allocation around this level.
- The Fund will continue to build out positions in defensive high yielding stocks while taking advantage of trading opportunities.
- The Fund's equity portion performed well in August on the back of good Healthcare and Financials selections despite overall market weakness.
- FI allocation increased to 41% from 30% due to net buying activities.
- Investment decisions were centered on accumulation of fixed income weightings to meet its minimum allocation level. The Fund sought yield accretion from a corporate bond within the AA3 segment. During the month, sentiment turned cautious with better selling interests in the longer end of the curve following the sharp contraction in 2Q GDP and weaker-than-expected demand received at government auctions. Nevertheless, the sell-off had limited impact on the portfolio due to the neutral duration positioning.
- Current allocation is within its long-term target allocation range.
- The Fund will look for select opportunities to add yield to the portfolio via reinvestments.

Equity

Global equities generally continued to advance in August 2020, despite a mixed backdrop which juxtaposed recovering economies against resurgent waves of COVID-19. While new cases and fatalities in the US have been stabilising towards the end of August, caution is more acute in parts of Asia and in Europe, where Italy, France and Spain have reported the highest new daily cases in months. Market moves: US (+7.6%), Hong Kong (+2.4%), Shanghai (+2.6%), Japan (+6.6%), Korea (+3.4%), Taiwan (-0.6%), Eurozone (+3.1%), UK (+1.1%), Singapore (+0.1%), Thailand (-1.3%), Indonesia (+1.7%), and Australia (+2.2%).

In the US, the widely-anticipated additional relief package failed to materialise as the Democrats and Republicans did not come to an agreement on how the package should be designed despite persistent COVID-19 infections throughout the month. This led to an executive order by President Trump to put into place measures (including expanded unemployment benefits and temporary tax deferral) targeted to achieve some of the objectives under the stalled relief plan. However, the shortcomings on the fiscal policy front did not stop the equity markets, especially the S&P500, to continue reaching new all-time highs. Optimism was rife in the markets owing to encouraging economic data and expected recovery in the second half of the year. The labour market showed signs of improvement as the unemployment rate managed to decline for a third consecutive month to 10.2% from 11.1% the previous month. Markit Manufacturing PMI for August of 53.6 also rebounded from the previous month's weaker-than-expected reading of 50.9, allaying concerns of new COVID-19 infections potentially stalling the economic recovery. Retail sales did slightly fall short of expectations at a monthly increase of 1.2%, after posting record-beating increases in the previous two months. The rally in equity markets was further driven by corporate earnings, after 2Q earnings season drew to a close with the highest percentage of companies in the S&P500 with positive quarterly earnings surprises since 2008. Although the infection rate has somewhat stabilised in recent weeks and states experiencing high resurgence in cases have largely gotten new infections under control, additional fiscal support still remains necessary as downside risks remain largely unabated.

An important development on the monetary policy front is the Federal Reserve chairman pointing towards an adoption of average inflation targeting in his update on the revised monetary policy framework. The market has been interpreting this as a signal of the Fed's stance against pre-emptive interest rate hikes which only serves to create an interest rate environment that is expected to be persistently low even if inflationary pressures start to accumulate in the economy. This new approach implies that the Fed would even allow inflation to exceed its target figure before implementing correcting measures. Such an accommodative monetary policy should continue to support the current lofty valuations of risky assets.

Over in Europe, markets were more jittery after major European countries reported a resurgence in new COVID-19 cases. The path to recovery for European economies was tested after economic data pointed toward a few stumbling blocks. Eurozone 2Q GDP fell by 12.1% over the previous quarter, slightly worse than forecast. The Eurozone Composite PMI for August showed some setback in its momentum of expansion, registering a reading of 51.6 after three consecutive readings which beat forecasts. As investors digested corporate earnings throughout the month, concerns on US-China relations and subsequent waves of infection did not stop equities to end the month higher. Markets largely stayed fixated on expectations of a strong rebound in the third quarter despite the latest hiccups to the European economy, partly helped by the European Central Bank's continuing accommodative stance.

In China, corporate earnings also drove equity performance with many of the earnings surprises coming from the internet sector. Economic data releases continued to reinforce the view that China is leading the global economic recovery. Industrial production for July maintained its yearly rate of increase from the previous month, while consumer demand is still not registering any gains compared to last year even up to the month of July. Relations between the US and China continued to be a risk pervading global markets as Huawei was again the target of fresh US restrictions, while social networking app TikTok became the latest centrepiece in US allegations of Chinese espionage. Retaliation towards the curtailing of Hong Kong's political freedom continued with further sanctions being imposed by the US on certain China and Hong Kong officials. However, trade matters saw a positive development, as both the US and China reaffirmed their commitment on the Phase One trade deal in a biannual review.

On the local market, most companies released their 2Q results, with many posting record low earnings as the pandemic and the movement control order restricted their business operations. This is in line with Malaysia's 2Q GDP reading of -17%, which came in much weaker than expected. Although the worst may be over, market is expecting for another overnight policy rate cut to provide further support to an ailing economy. GDP estimates for this year have also been revised down in light of the recent data. Local equities experienced a pullback as there was some rotation out of the sectors that have rallied tremendously year-to-date, with the FBMKLCI registering a decline of 4.9%.

On the commodities front, oil prices continued to push higher, especially in the last few days of the month as Hurricane Laura temporarily raised concerns of disruption to oil supply from the US Gulf Coast. Demand for oil kept pace with the expected recovery in economic activity, while the OPEC+ continued with its production cut compliance. Continued weakness in the US Dollar also lent support to oil prices. Gold prices lost momentum from the previous month to end the month lower.

While signs are clear that a 2Q 2020 recovery is underway, the global aggregated economy remains firmly below pre-pandemic levels as 'new normal' conditions prove critically challenging for certain sectors, despite creating new winners in others. With liquidity conditions reaching historical levels of abundance thanks to aggressive central bank activity, the current landscape suggests that there are still opportunities in equities, from both developed and emerging markets. Political and event risks are a primary factor to monitor, with the upcoming US elections carrying a wide range of policy outcomes that would affect the rest of the world. Locally, political risk remains a present concern amid restrictive fiscal conditions, but corporate earnings are likely to have troughed and verge towards recovery notwithstanding any subsequent lockdowns. We have upgraded our view on local equities to Neutral, from Underweight previously, and remain Neutral on foreign equities.

Fixed Income

US Treasuries continued its positive tone early of the month as economic data flows had dimmed growth prospects, unnerving investors. Newer and lower levels were clawed into the yield curve as the 10Y yield touched 0.51% on several counts. Thereafter, yields bore the brunt of a bulky refunding package following the release of additional USD1 trillion requirement from US Department of Treasury in anticipation of supplementary legislation being passed in response to the COVID-19 outbreak. The curve started to steepen mid-August underpinned by incremental supplies coupled with heavy Investment Grade (IG) issuances in a benign inflationary environment. Towards end-August, all eyes were shifted towards Fed Chair Powell's speech in Jackson Hole, in which the Fed had effectively raised the bar for rate hikes in the medium term with its average inflation targeting framework. As a result, longer-end yields continued its climb, steepening the curve further. The 2Y and 10Y yields closed the month 3bps and 18bps higher at 0.13% and 0.70% respectively.

In Malaysia, foreign investors continued to pile on local government bonds as foreigners scoured for yields following recent Fed's pledge to keep interest rate near zero. Furthermore, markets have started to pre-emptively price in another potential 25bps cut despite recent overnight policy rate cuts to a record low of 1.75%. This follows the release of 2Q2020 GDP of -17.1% YoY, which marks the steepest quarterly decline on record. That said, previous month's bullish run had created an environment of cautious behaviour, causing yields to trade sideways. Bids in the primary market were lukewarm as well. Auctions for 20Y MGS and 30Y GII garnered tepid BTCs of 1.469x and 1.423x respectively, much lower than YTD average cover ratio of around 2.3x. The 3Y yield ended the month 5bps lower at 1.85% whereas the 10Y yield ended the month 6bps higher at 2.61%.
