KEY RISKS

General risks of investing in a unit trust fund	
Returns not guaranteed	The investment of the fund is subject to market fluctuations and its inherent risk. There is NO GUARANTEE on the investment returns, nor any assurance that the fund's investment objective will be achieved.
General market environment risk	Refers to the possibility that an investment will lose value because of a general decline in financial markets, due to economic, political and/or other factors, which will result in a decline in the fund's NAV.
Inflation risk	This is the risk that investors' investment in the unit trust fund may not grow or generate income at a rate that keeps pace with inflation. This would reduce investors' purchasing power even though the value of the investment in monetary terms has increased.
Manager's risk	This risk refers to the day-to-day management of the Fund by the manager which will impact the performance of the fund, e.g. Investment decisions undertaken by the manager as a result of an incorrect view of the market may adversely affect the performance of the fund.
Loan financing risk	This risk occurs when investors finance their investment. The inherent risk of investing with borrowed money includes investors being unable to service the loan repayments.
Specific risks of the Fund	
Credit and default risk	Credit risk relates to the creditworthiness of the securities issuers or counterparties and their expected ability to make timely payment of interest and/or principal. Default risk relates to the risk a securities issuer or counterparties either defaulting on payments or failing to make payments in a timely manner. If the risk materialize, the value of the fund could be adversely affected.
Interest rate risk	Interest rate risk refers to the impact of interest rate changes on the valuation of debt instruments.

	When interest rates rise, debt instruments prices generally decline and this may lower the market value of the fund's investment in debt instruments.
Company specific risk	The investment of the Fund in companies may be affected by any company-specific changes such as the company's business situation, unforeseen entry of a new competitor into the market or the company's credit rating being downgraded. This may cause the price of any issuance by that company to fall and in turn may cause the net asset value of the Fund to fall.
Risk associated with investment in warrants	There are inherent risks associated with investments in warrants. The value of warrants are influenced by the current market price of the underlying securities, the exercise price of the contract, the time to expiration of the contract and the estimate of the future volatility of the underlying security's price over the life of the contract.
Risk associated with investment in structured products	Investments in structured product are linked to the performance of specific underlying assets and are not equivalent to investment directly into those underlying assets. Generally, structured product has specified investment tenure. In the event the structure product unwinds before its maturity, the Fund may not be able to recoup the full principal amount. Investments in structured product are also subject to credit and default risk of the issuer of the structured product. Where the issuer of the structured product is unable to meet its financial obligations towards the Fund, the value of the Fund will be adversely affected. As such, investments in structured products may increase likelihood of high volatility of the NAV per unit of the Fund. We aim to mitigate this risk by having a stringent credit selection process for the issuer. If we are of the opinion that there is a material adverse change to an issuer, we may consider unwinding that particular structured product.
Risk associated with investment in derivatives	As the Fund may invest in derivatives, it may be subject to risks associated with such investments. Investments in derivatives may require the deposit of initial margin and additional deposit of margin on short notice if the market moves against the investment positions. If no provision is made for the required margin within the prescribed time, the Fund's investments may be liquidated at a loss. As such, investments in derivatives may increase likelihood of high volatility of the NAV per unit of the Fund. Therefore, it is essential that such investments in derivatives be monitored closely. We have the necessary controls for investment in derivatives and have in place systems to monitor any derivative positions for the Fund.

Note: Please take note that if your investments are made through an IUTA via a nominee system of ownership, you would not be deemed to be a Unit holder under the Deed and as a result, you may not exercise all the rights ordinarily conferred to a Unit holder (e.g. the right to call for Unit holders' meetings and the right to vote at a Unit holders' meeting).
