*\*Core Funds refers to Kenanga OnePRS Growth Fund, Kenanga OnePRS Moderate Fund and Kenanga OnePRS Conservative Fund, which are collectively known as “Core Funds”.*

## KEY PRODUCT FEATURES

### 3. How does the Scheme works?

The Scheme is designed to provide choices to the members in building their retirement funds.

Members can choose to contribute to any fund according to their risk and return profile.

If a member does not select a fund, the PRS Provider will allocate the members’ contributions into the prescribed Core Fund (default option) that corresponds to the age of the members as specified below:

Name of the Core Funds	Asset Allocation	Age Group*
Kenanga OnePRS Conservative Fund	Minimum 80% of the Fund’s Net Asset Value (“NAV”) in fixed income instruments and money market instruments (with minimum 20% of the Fund’s NAV in money market instruments).	Members aged 50 years and above.
Kenanga OnePRS Moderate Fund	Maximum 60% of the Fund’s NAV in equities.	Members aged 40 years and above but have not reached 50 years.
Kenanga OnePRS Growth Fund	Maximum 70% of the Fund’s NAV in equities.	Members aged below 40 years.

*Note \* - This age group may be subject to changes as may be determined by the relevant authorities from time to time.*

Notwithstanding the above, where a member under the default option makes the first contribution to the Scheme a month before the member attains the age of 40 or 50 years old as the case may be, the PRS Provider must allocate such contribution to the Kenanga OnePRS Moderate Fund or Kenanga OnePRS Conservative Fund as the case may be.

All contributions made by a member will be maintained in two separate sub-accounts by the PRS Provider as follows:

- (a) Sub-account A which is not available for pre-retirement withdrawal\*; and
- (b) Sub-account B which would be available for pre-retirement withdrawal subject to payment of tax penalty of 8% (which is deducted by the PRS Provider) which is imposed by the Inland Revenue Board of Malaysia and also a Private Pension Administrator ("PPA") pre-retirement withdrawal fee.

\*Please note that request for full withdrawals (from both sub-account A and sub-account B) can be done in the following circumstances:

- (a) the member reaching the retirement age;
- (b) following the death of the member; or
- (c) due to permanent departure of the member from Malaysia.

The transfer can be made in the following manner:

- (a) from one or more Funds of the PRS Provider to one or more funds of another PRS provider; or
- (b) be a consolidation of all units held in all private retirement schemes to one PRS. The consolidation is only possible if the member is also a member of all private retirement schemes for more than one year and provided that no transfer of units has been made by a member from a particular PRS provider in that calendar year.

The transfer will be from sub-account A to another sub-account A or / and from sub-account B to another sub-account B.

The PRS Provider shall pay the proceeds of such redemption to the other PRS provider by way of cheque or telegraphic transfer within 5 business days from the date the PRS Provider receives a completed transfer form from the PPA.

**KEY RISKS**

**5. What are the risks**

**General Investment Risks**

<b>Capital and returns not guaranteed risk</b>	The Funds are neither capital guaranteed funds nor capital protected funds. As such, the capital and returns of the Funds are not guaranteed as market price of investments owned by the Funds may go down or up and members may sustain a loss to the value of the units of the Funds.
<b>Risks associated with default option</b>	Where the member is in the default option, the member's investments will be automatically switched into the Core Fund that corresponds to the age of the members upon attaining the relevant age group. However, the NAV per unit (of the Core Fund in which the member is currently invested) at the point of switching may be lower than the NAV per unit when the member initially contributed into the Core Fund. Hence, the member may have to suffer losses upon switching out from the Core Fund in which the member is currently invested. However, the PRS Provider will notify the member 1 month before the member attains the minimum age of the next age group as specified in the Guidelines on Private Retirement Schemes issued by the SC("Guidelines"), that the member's current investments will be automatically switched into another Core Fund. As such, members can still have the option to stay on with the particular Core Fund before their contributions are switched.
<b>Legal and regulatory risk</b>	The investments of the Fund would be exposed to changes in the laws and regulations made by the government and regulatory bodies. There is a risk that the laws and guidelines relating to private retirement schemes may change and this may affect members' OnePRS account and/or their ability to access their units in the account. Furthermore, changes in the guidelines may also have an impact on the Fund. For example, the asset allocation of the Core Funds may be changed by the fund manager due to changes to the Guidelines in relation to the asset allocation of the Core Funds. Such changes may change the risk profile of the Fund.
<b>Market Risk</b>	The NAV of the Fund may go down or up due to factors affecting the local and global financial markets such as changes to the economic (e.g. interest rates, inflation and exchange rates), political and regulatory environments as well as external shocks such as war and natural disasters. All these may result in uncertainties and fluctuations in the price of the underlying securities of the Funds' investment portfolio.
<b>Inflation Risk</b>	This is the risk that the members' contribution to the Fund may not keep pace with inflation. When this happens, the member's purchasing power would be reduced even though the value of the member's OnePRS account in monetary terms has increased.
<b>PRS Provider Risk</b>	The Funds are managed by the investment management team of the PRS Provider. Any lack of expertise and experience of the investment management team may result in poor performance of the Funds.

**Specific Risks related to the Fund**

	<b>Kenanga OnePRS Growth Fund</b>	<b>Kenanga OnePRS Moderate Fund</b>	<b>Kenanga OnePRS Conservative Fund</b>
<p><b>Interest Rate Risk</b></p> <p>This refers to the effect of interest rate changes on the market value of a bond, which the Fund invests in. In the event of rising interest rates, prices of bonds may decline and vice versa. As such, a Fund that has more exposure to bonds in its portfolio will be affected more by the changes in interest rates as compared to other Funds with less exposure to bonds.</p> <p>Bonds with longer maturity and lower coupon rate are more sensitive to interest rate changes. This risk can be mitigated by managing the duration* of the bond portfolio via shorter or longer tenured bonds depending on the PRS Provider's view of the future interest rate trend, which is based on its continuous fundamental research and analysis.</p>	√	√	√

<p>* Duration is a measure of how sensitive is the price of a bond to a change in interest rates, expressed as a number of years.</p>			
<p><b>Liquidity risk</b></p> <p>Liquidity risk refers to the possibility that a security may be sold at an unfavourable price, as there may not be a buyer, or sufficient buyers, available for the security. This, in turn, will adversely affect the NAV of the Fund. This, in turn, will adversely affect the NAV of the Fund. The risk can be mitigated through the process of security selection and portfolio diversification.</p>	√	√	√
<p><b>Credit/ Default risk</b></p> <p>The Fund could lose money if the issuer or guarantor (if any) of a bond that the Fund invests in is unable or unwilling to make timely principal and/or interest payments. Bonds are subject to varying degrees of credit/default risk, which are often reflected in credit ratings. This risk can be mitigated by selecting bonds with a minimum rating of "investment grade" i.e. BBB3 by RAM or equivalent rating by MARC.</p>	√	√	√
<p><b>Stock-specific risk</b></p> <p>The price of each individual stock that the Fund invests in may decline for a number of reasons such as the management performance, financial position and reduced demand for the company's goods and services. This risk is mitigated through portfolio diversification by investing in various companies across different sectors in the management of the Fund.</p>	√	√	√
<p><b>Derivatives risk</b></p> <p>Derivatives such as warrants are subject to risks such as market risk and liquidity risk. Moreover, the use of derivatives results in a leveraged / geared portfolio which may cause the price movements of the Funds to be much more volatile as compared to Funds without derivatives. As such, investing into derivatives like warrants may result in higher volatility of the Fund's NAV.</p>	√	√	<b>Not applicable</b>
<p><b>Collective Investment Scheme risk</b></p> <p>The Funds may invest substantially into collective investment schemes managed by the PRS Provider at the launch of the Funds. As such, the Funds are subject to the risks faced by the respective collective investment schemes. For example, the performance of the Fund is dependent solely on the performance of the collective investment scheme(s). As such the Fund is exposed to the price fluctuations of the securities that the collective investment scheme(s) invest(s) in.</p> <p>Furthermore, in the situation where the collective investment scheme(s) has insufficient liquidity to meet large and frequent redemptions made by other unit holders of the collective investment scheme(s), the fund managers of the collective investment scheme(s) may be forced to sell large volumes of the collective investment scheme(s)'s portfolio at unfavourable prices to meet such requests.</p>	√	√	√
