^aNote: Redemption monies of this Fund will generally be paid the next business day (a working day when the Manager is open for business) after receipt by the Manager of the request to repurchase.

INVESTMENT STRATEGY

This Fund will invest in a portfolio of Malaysian Ringgit deposits with financial institutions in Malaysia.

At least 98% of Net Asset Value

- Investments in deposits with financial institutions which have a remaining maturity period of not more than 365 days.

Up to 2% of Net Asset Value

- Maintained in cash.

Although the Fund is actively managed, its fund management strategy will depend on the interest rate environment and the anticipated redemption requests by the Unit Holders.

DISTRIBUTION

Distribution Policy	Consistent with the Fund's objective which aims to provide investors a high level of liquidity while providing reasonable returns via higher NAV per unit, there will be no distribution of returns to the Unit Holders.
Distribution Mode	No distribution will be made. All returns achieved by the Fund will be reflected in the Net Asset Value of the units of the Fund.

KEY RISKS

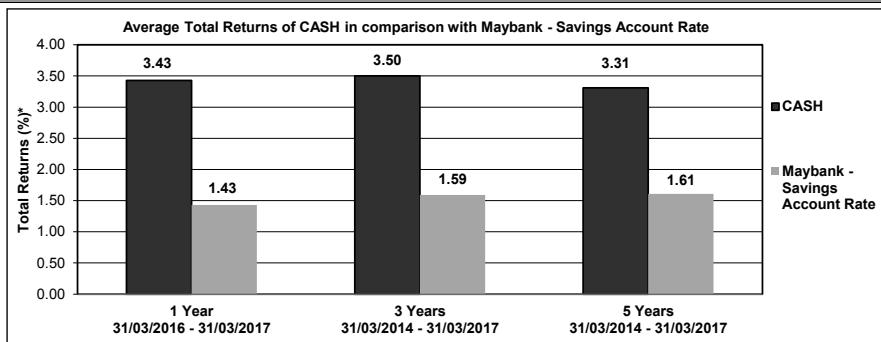

As the Fund invests its assets in a portfolio of deposits with financial institutions, certain risks are therefore peculiar to the Fund. They are:

Credit / Default risk	This refers to the creditworthiness of the financial institutions and its expected ability to make timely payment of interest and principal. Default happens when the financial institutions are not able to make timely payments of interest and principal.
-----------------------	--

Inflation / Purchasing power risk	Inflation can be defined as increases in the price level of goods and services and is commonly reported using the consumer price index as a measure. Inflation is one of the major risks to investors and results in uncertainty over the future value of the investments. Inflation reduces purchasing power of money. In an inflationary environment, fixed rate deposits are exposed to higher inflation risks than equities due to its fixed returns nature as compared to equities whose return are variable.
Interest rate risk	Interest rate risk is crucial in this Fund since deposits portfolio management depends on forecasting interest rate movements. Interest rate changes could affect the Fund's potential returns from future placements in deposits if the strategy taken by the fund manager differs from the actual outlook of the interest rates market. In an environment of falling interest rates, the Fund's future placement in deposits would be reinvested at lower interest rates which in turn will reduce the potential returns of the Fund. This risk will be mitigated via shorter or longer tenured deposits depending on the Manager's view of the future interest rate trend, which is based on its continuous fundamental research and analysis.
Returns are not guaranteed	There is no guarantee on the investment returns to Unit Holders. Unlike fixed deposits which carry a specific rate of return, the Fund does not provide a fixed rate of return.
