

INTRODUCTION

- INITIATION DATE:** 01 July 2014
- OBJECTIVE:** This higher risk portfolio aims to achieve long term capital appreciation by investing 30% into fixed income and 70% into equities
- SUITABLE FOR:** Aggressive investors who understand the risks and fluctuations in stock markets and those who have a long-term investment horizon. Could be a person saving for retirement.

STRATEGY

- EQUITIES**
- Equities to fare better in a rising yield environment and improving global economic outlook.
 - Continue to favour Asia ex-Japan and Emerging Markets regions although we recognise selected EM markets are facing some domestic economic issues
 - These regions offer the most upside potential due to their attractive valuation
- FIXED INCOME**
- Continue to underweight fixed income asset class to guard against the potential rise of interest rate
 - The negative impact of the rising yields might be milder on local bonds especially corporate debt
 - Corporate debt has a higher credit spread over Malaysia government bond yields, a stable interest rate environment and no signs of rising credit risk observed so far

HOLDINGS

Fund Name	Weighting	NAV at 31 Oct	NAV at 30 Nov
